DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-6, drawn to a signal generation power management control system for dynamically adjusting a bias current used by the DAC based on minimal signal requirements of the at least one analog signal.

II. Claims 7-10, drawn to a power management control system for adjusting the control parameters of the DAC, DAC filter, mixer and power amplifier based upon digital protocol received by the DSP.

III. Claims 11-15, drawn to method for managing power to a communication system comprising the steps of controlling a supply bias used by the DAC based upon the MA, noise requirements and intermodulation requirements of the portable communications system.

2. The inventions are distinct, each from the other because:

Inventions Group I, Group II and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination Group II has separate utility such as for adjusting the control parameters of the DAC, DAC filter, mixer and power amplifier based upon digital protocol received by the DSP

Art Unit: 2618

and subcombination Group III for controlling a supply bias used by the DAC based upon the MA, noise requirements and intermodulation requirements of the portable communications system. See MPEP § 806.05(d).

3. Because these inventions are independent and distinct for the reason(s) given above and have acquired a separate status in the art as shown above by their recognized divergent subject matter and a different field of search is required for each group (see MPEP § 808.02), restriction for examination purposes as indicated is proper

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of an invention or a species to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

5. The election of an invention or a species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

6. Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
